Parking Sensors & Daytime Running Lights

Reverse parking sensors are now an affordable solution to increasingly difficult parking conditions with vehicles growing in size and number, and parking spaces shrinking in size and availability. Once you have experienced the benefit of parking sensor technology there is no going back.

»» Parking Sensors

The Dolphin Parking Sensor won the Coveted "Best Buy" Award from Auto Express Magazine following their independent assessment of available aftermarket kits. Points were awarded for product quality, performance and price. Dolphin offers a range of kits with options from four to eight sensors, both front and rear with audio or more detailed visual alerts.

»» The Technology

By emitting ultrasonic sound waves, which bounce off objects close by and return to the sensors, it is possible to calculate the distance to the object based on the speed of sound. This is based on the principles of the Doppler effect and is used by Dolphins to navigate!

LIFETIME WARRANTY
ON ALL PARTS
to the original purchaser

»» The DPS Range

Depending on your requirements, systems are available with the traditional audio alert which increases in frequency the closer you get to an obstacle. The addition of a display, which can be dash or roof mounted at the rear, will give you a visual countdown in cm with an indication of which side of the vehicle is closest to the object.

»» DPS Range Colours Available

Available in 30 colour options. Matt black sensors can be coloured using a spray paint with a coat of primer and sealer.

»» DPS400/450/455

Available for the rear of your car, the rear sensors power via the reversing light feed and come on automatically when you select reverse gear. Available as audio (DPS400), dash display (DPS450) or rear roof display (DPS455).

»» DPS400F/450F

The front sensors come with longer 6m cables for fitting around the engine bay and are designed to be manually controlled via a rocker switch on the dash as standard. Upgrade options are available including a CAN bus interface.

»» The DMS Range - New Micro Sensors

We can now offer a range of micro sized sensors requiring just 18.2mm holes in your bumper using the latest micro-electronic components. These are available in white, silver, gloss black and matt black which are suitable for spraying if a custom paint colour is required.

»» LED Daytime Running Spot Lights - DRL550 AUTO

Now you can bring your car up-to-date and make sure you too are seen with an LED Daytime Running Light kit from Dolphin. Our LED Spot Lights are drilled into the bumper and can be individually placed allowing endless opportunities for placement and styling as you wish. They are available with the housings in 4 colour options, matt black, gloss black, silver or white.

»» Features

- Lifetime warranty
- 2 x 5 LED's for increased brightness with minimal power consumption
- Can be individually placed, do not have to be in a straight line
- Supplied with positioning stickers
- Available in 4 colour options
- Automatically switches off when headlights come on, so you don't dazzle other drivers at night
- Fully meets the CIE standard
